In general, if a patient shows neither toxicity nor remission after a 5-day course, treatment may be stopped. After a two- to nine-day rest period, a 3-5 mg/kg/day of Cytarabine may be administered intravenously on each of the two subsequent days. If toxicity occurs, increase to 4 mg/kg/day and maintain until toxicity subsides or until remission is established.

1. What Cytarabine injection is and who it is used for

Cytarabine injection is a medicine containing cytarabine, a cytostatic drug. It is used to treat acute myeloid leukaemia (AML), acute lymphocytic leukaemia (ALL), and other haematological malignancies, as well as solid tumours. Cytarabine is classified as a weak cytostatic because it is not as toxic as the anthracyclines or the platinum salts.

2. Maintenance therapy:

The dose of cytarabine should be reduced in patients who are vomiting or who have diarrhoea. In these cases, the dose should be reduced by half. If a patient experiences toxicity, the dose should be reduced to 1.5 mg/kg/day or 2 mg/kg/day.

3. Delivery of cytarabine

The recommended dose is 100-200 mg/m2, as continuous infusion for 5 days at monthly intervals. It is important to note that the duration of action of the high dose is about 10 days. Given medicines containing cyclophosphamide, whether you are in induction or maintenance therapy, Cytarabine should be given only with caution. On the other hand, given medicines containing corticosteroids, the acute leukemias should be relieved and, if possible, cytarabine should be given with any of these medicines.

4. What happens if you miss a dose

If you forget to take a dose of Cytarabine injection on the day, do not take the missed dose to make up for the forgotten one. Take the next dose as planned. Contact your doctor if you are in any doubt.

5. How to use Cytarabine injection

Cytarabine injection is a sterile solution that you can use in adults and children. The solution is clear and colorless. The solution should be used immediately after opening the vial.

6. Contents of the pack and other information

You will receive depending on your condition. The recommended dose is 100-200 mg/m2, as continuous infusion for 5 days at monthly intervals. It is important to note that the duration of action of the high dose is about 10 days.

7. Special precautions for use

8. Side effects

9. Overdosing

10. Disposal of marketed packaging and unused product

11. Further information

This medicine has been prescribed for you. Do not pass it on to others. It may harm them, even if their signs of illness are the same as yours.

12. What is the medicine for

The recommended dose is 100-200 mg/m2, as continuous infusion for 5 days at monthly intervals. It is important to note that the duration of action of the high dose is about 10 days.

13. Dosage and administration

As a rule, patients have been seen to tolerate the high dose of Cytarabine injection, whether you are in induction or maintenance therapy. The recommended dose is 100-200 mg/m2, as continuous infusion for 5 days at monthly intervals. It is important to note that the duration of action of the high dose is about 10 days.

14. How to use Cytarabine injection

Cytarabine injection is a sterile solution that you can use in adults and children. The solution is clear and colorless. The solution should be used immediately after opening the vial.

15. Why you should not use Cytarabine injection

If you have any further questions, please ask your doctor or pharmacist for advice before taking any medicine.
